## Summary

Senior product designer with 8 years of experience at AstraZeneca across enterprise AI, patient-facing healthcare, and data-dense operational products. Fluent with AI prototyping tools as a daily part of practice. MSc in HCI.

## Experience

### AstraZeneca

Senior Product (UX) Designer  
UX Designer

June 2020 – Present  
April 2018 – June 2020

- Led end-to-end design of AstraZeneca's first custom generative AI enterprise platform, spanning core chat, RAG, search, and projects, designing interaction patterns to hold up across features and unanticipated use cases
  - Reached 93% lifetime adoption (84K users) and 60K MAU, with an 11% increase in active users
  - Helped save users an average of 2.7 hours per week through workflow automation and improved information access
  - Supported 48M+ prompt-completion pairs in 2025, requiring scalable interaction patterns and resilient system behavior
- Contributed to design of AMAZE, a native iOS and Android remote patient monitoring product for chronic disease care (asthma, CHF, CKD)
  - Redesigned the patient health data experience with familiar native patterns, and reworked onboarding to make SSN optional after research showed 60% of patients were abandoning at that step
  - Conducted site visits, co-design sessions, and usability testing with patients and clinicians (100+ hours), translating research into design direction alongside the team
  - Deployed at 3 health systems, reaching 51% DAU:MAU during interventional studies; later commercialized for \$33M
- Redesigned a global KPI dashboard used across 33 manufacturing sites, replacing fragmented PowerPoint and BI workflows with standardized review, drill-down, filtering, and meeting-preparation flows (~\$300K annual savings from legacy tool decommissioning)
- Introduced AI-native prototyping (Claude Code, Figma MCP, agent workflows) into daily practice; used MCP to audit the existing design system's token gaps, saving an estimated two weeks of design FTE and building the case for a semantic token layer with dedicated engineering support

- Partnered with product management to shape sprint backlogs, prioritizing design work by user research signal, feedback insights, and engineering capacity, and coached junior designers on scoping and executing their sprint work
- Started a weekly design critique to give the team a regular space for feedback, questions, and direction
- Co-created and taught design thinking courses for 300+ non-design colleagues, building shared UX vocabulary and organizational fluency

## **U.S. Department of Housing and Urban Development**

UX Designer

January 2017 – April 2018

- Co-led an intranet redesign for IT, significantly reducing internal help requests and support overhead
- Introduced and taught design thinking practices to cross-functional colleagues within a federal agency environment

## **Education**

### **University College London**

MSc, Human–Computer Interaction

September 2016

### **University of Delaware**

B.A., English; Minor, Computer Science

May 2010

## **Skills**

- Interaction design and systems thinking across AI-assisted, data-dense, and workflow-heavy products
- User research, workflow assessments, and design sprint facilitation
- Design system architecture and tokens AI-native prototyping (Claude Code, Figma Make, Figma MCP, agent-based workflows)
- Design QA and design-to-engineering alignment
- Cross-functional partnership with Product, Engineering (frontend, backend, ML/MLOps), Research, and QA
